

The wall cladding system specified by design professionals
and Contractors across the globe.

Jemiclad Textured is the most advanced upgrade to out dated, standard FRP on the
market.

Jemiclad

Textured (aka) The FRP One
Canadas thermoform-able hygienic kitchen wall cladding.

Like FRP Only Way better

When your customer wants it to look like traditional textured FRP, But you Need it to perform like PVC.

Jemiclad Textured

- All Jemiclad Canada Panels are Class A fire Rated and Class Zero Smoke Rated
- All Jemiclad Canada Panels Are Pure PVC Throughout And DO NOT Rely On A “Clear Coat” To Make Them Food Safe And Waterproof Like Traditional Out Dated FRP Products
- All Jemiclad Canada Panel Waste Can Be Placed Into The Plastics Recycling Instead Of The Trash, Reducing Waste And Keeping It Out Of Our Land Fill
- Jemiclad Canada Panels Contain **No Fibreglass** And Can Be Safely Cut With Most Of Your Favorite Tools With Any Concern Of Creating Itchy And Potentially Dangerous Air Born Fibreglass Dust.
- All Jemiclad Canada Textured Panels Are **Non Directional**. This Detail Allows The Installers To Further Reduce Waste and Materials By Utilizing The Scraps And Cuts.
- All Jemiclad Canada Panels Can Have The Inside and Outside Corners **Custom Bent** On Site By The Installer, Using The Thermoform Tool Available To Order At www.jemicladcanada.com
- If The Thermoform Tool Is Not In Your Budget, Customers And Installers May Order Custom Bent Or The DIY Pre Formed 3”x3”x Full Height Pre bent Inside And Outside Corners From Their Local Distributors.
- All Jemiclad Canada Panels Can Be Installed Using One Part, Inside, Outside, J-Trim and Divider Trims The Same Way As Traditional Out Dated FRP Products To Meet All Value Engineered Budgets And Instal Skills

Jemiclad Textured Provides Round The Clock Anti-bacterial Protection

Protection in healthcare

Healthcare associated infections such as MRSA acquired during hospital stays are the most common complications of hospital care and one of the most serious patient safety concerns.

Jemiclad Products are used in hospitals, dental surgeries, care homes and GP practices around the world in products ranging from beds to cubicle curtains, nurse call systems, walls and ceilings, door kicks all the way to shower surrounds.

Protection for food and catering

Throughout the food chain, good hygiene practices are essential to prevent the spread of E.coli, Campylobacter, Listeria and Salmonella. Jemiclad Canada PVC Panels can reduce food contamination from bacteria and the risk of food poisoning throughout its preparation, processing, packing and distribution. For example Restaurants use Jemiclad Canada products in kitchens, dish pits, mop rooms, janitor closets and loading bay areas on walls and are even used as truly washable light weight ceiling tiles.

Protection in the office

Wherever large numbers of people gather together, the chances of exposure to germs and the risk of cross-infection increase. Some office germ hot-spots carry more harmful bacteria than the average toilet seat.

Jemiclad Products are easily added to any high touch wall surfaces in the workplace, giving complete and ongoing protection against harmful bacteria.

Protection in education

Even if a nursery or a classroom starts out clean, germs can build up throughout the day. Harmful bacteria collect on frequently touched surfaces, especially in areas where there is a lot of hand-to-mouth contact, such as the walls in the class room, lunch room, Washroom, locker room or cafeterias.

Tested and compliant

We know Jemiclad Canada Products are highly effective at reducing bacteria levels but it is essential that you are just as confident with the Jemiclad products as well. No amount of protection can compete with a good cleaning and maintenance schedule. But when combined with the great Jemiclad anti-microbial products, you have a winning combination.

We also work closely with our customers to ensure Jemiclad Products comply with the required federal and municipal regulations regarding the manufacture, importing and marketing of products.

All Jemiclad Canada products are only limited by the imagination. Jemiclad Canada products are the perfect addition for any wall or ceiling surfaces that would benefit from durability, washability and reliability

Jemiclad Canada Textured products are a specially engineered homogeneous, non-porous wall and ceiling panel, that can be thermally formed around internal and external corners, reducing the need for corner guards. All joints can either be finished with a Two part colour matched co-extruded trim with water tight neoprene gaskets, a One part value engineered extruded trims or a colour matched flexible caulking, to give the ultimate hygienic surface, and a seamless finish which creates an airtight and watertight lining. All Jemiclad Canada Products are a clear investment that will give returns 24/7 for years to come.

The three part specification is available from our website below.

- Durable and Hygienic.
- Excellent for Welding and Thermoforming.
